Brattholmen well (4/4-1) is spudded

The Brattholmen well (4/4-1) was spudded Friday 13th September. The well is drilled from the jack-up rig Mærsk Giant.

The exploration well 4/4-1 for the Brattholmen prospect in PL 541 is located in the southern part of the North Sea, close to the Norwegian-Danish border, approximately 183 nautical miles (nm) south of Lista. The estimated duration of the drilling activities is 52.5 days (P-50), based on a dry hole scenario.

The license partners in PL 541 are:

RENAS (50%),
Edison International Norway Branch (35%),
Skagen44 AS (7.5%), and
Concedo ASA (7.5%).
