### **The Struten well, 6507/3-6, was dry**

The drilling of the well 6507/3-6 is now completed and will now be permanently plugged and abandoned as a dry well. The well is drilled on PL383 and is located 27 kilometers south of the Norne-field in the Norwegian Sea.

The well encountered a considerable column of reservoir rocks of satisfying quality in the Tilje formation from the Early Jurassic, but without any trace of hydrocarbons.

Other partners on the license are Det norske Oljeselskap ASA (operator) and VNG Norge AS.
